

Rochester NY Water Profile

This was obtained through two water reports one from Brian West and one from Craig Z. I looked at them both side by side and they were very very close. So i just averaged them and sharing it out. We recommend getting one for where you live. Different townships may have different water but if you get water from Monroe county water authority this should be really close. But we're recent reports.

Here it is:

Rochester NY water profile

Parts per million

Ca -Calcium- 33.8

Mg- Magnesium-9.0

Na- Sodium- 16.5

So4- Sulfate- 26.5

Cl- Chloride- 24.5

HCO3- Bicarbonate- 110.2

So long story short. Load this in as your starting profile before doing any adjustments based on style and desired finish beer (there are some tips for ranges on Craig's handout) that have some tweaks. Hope this helps. Dean recommended brewers friend as a program to help. Beersmith works as well.
